

MISSOURI DEPARTMENT OF AGRICULTURE
CHRONIC WASTING DISEASE

VOLUNTARY HERD AGREEMENT FOR CAPTIVE ELK

CERTIFICATE NO.

Following are the methods and rules for establishing and maintaining a monitored captive elk herd as recommended by the Missouri Department of Agriculture (MDA). This is a voluntary program for captive elk in Missouri.

SECTION I. INDIVIDUAL ANIMAL IDENTIFICATION

All animals over one year of age are identified with an official eartag or other approved identification device. Use the same individual animal identification on all herd inventory records. All animals less than one year of age will be identified on a change of ownership.

NATURAL ADDITIONS to the herd will be noted on the inventory record as "NA" along with their individual animal identification; and

PURCHASED ADDITIONS will be noted with the letters "PA" along with their individual animal identification.

Any animal in the herd that must be retagged or re-identified will be noted with the letters "RT" and the former identification provided.

SECTION II. SURVEILLANCE

Surveillance will be maintained by collecting and submitting appropriate samples from all cases of mortality, including slaughter, in animals over 12 months of age.

SECTION III. HERD INVENTORY RECORDS

An initial herd inventory will be performed by the owner in the presence of a MDA representative. Herd inventory records will be maintained to provide accountability for all purchases, sales, commercial slaughter, and other mortality from the date of enrollment in this program.

SECTION IV. PROGRAM STATUS

Once a herd is approved to participate in the program, the herd will be considered an enrolled herd with the date of approval being the enrollment date. A herd will gain program status and advance to the next level based on the herd's enrollment date and the continuous number of years in the program. The status will be dependent on the herd being in compliance with the program guidelines and being approved annually for advancement in the program.

Program classification will be as follows:

- Year 0 - herd is enrolled in the program
- Year 1 - one year of surveillance and successful completion of program requirements
- Year 2 - two years of surveillance and successful completion of program requirements
- Year 3, 4, 5, etc. - for each successive year of surveillance.

SECTION VI. ACQUISITIONS AND COMMINGLING

- Additions may originate from herds of equal or higher status with no change in the status of the receiving herd.
- Additions may originate from herds of lower status with the receiving herd acquiring the lower status of the herd(s) involved.
- When establishing a new herd entirely from an enrolled herd, the herd of origin's status level will transfer to the new herd if the new herd owner notifies the department and submits an application for participation in the program within 90 days of the animal's arrival on the farm and before any herd additions. Applications received more than 90 days after the arrival will be reviewed by the department. The enrollment date of the new herd will be the date of the approval by the department.
- Enrolled herds may not use germ plasm from any donor found to be CWD positive. Enrolled herds may use semen from lower status or non-participating herds with no effect on program status as long as the semen is not from infected herds or trace herds at the time of collection. Embryo recipient animals must meet the program requirements for animal acquisitions.
